Education

Hunter College (CUNY) Manhattan, NY

Bachelor of Arts in Computer Science, Minor in Mathematics Aug. 2023 - May 2027

- Software Analysis & Design I - III
- Computer Architecture I & II
- Computer Theory I
- Parallel Computing
- Network Security
- Database Management
- Matrix Algebra
- Applied Statistics
- Calculus I - III

Experience

Edith and Carl Marks JCH Brooklyn, NY
of Bensonhurst

- Worked in a high-paced environment, adapting website and flyer content at a moment's notice, to reflect changes.
- Maintained and expanded the WordPress website, serving thousands of daily visitors.
- Used Mailchimp and Wufoo to facilitate communication with thousands of subscribing members.
- Used Photoshop and Canva to design, create, and update flyers for new and existing programs.

The Marks Jewish Community House works to connect the Jewish community of Brooklyn.

Projects

Gainz: CSCI 49900 Capstone Final Group Project

[github.com/
MaxFilsR/Gainz](https://github.com/MaxFilsR/Gainz)

*Actix Web, Caddy, Cloudflare,
Docker, PostgreSQL, Rust,
React Native, SQLx*

- Spearheaded backend development with 62,000 lines of code written.
- Designed and wrote a RESTful CRUD API specification, which was later translated into JSON Schema.
- Designed and wrote an authentication for an API using JWTs.
- Designed and wrote PostgreSQL database schemas.
- Designed and wrote database queries using the SQLx library to be injection-proof and efficient.
- Hosted backend, publicly exposing API through a proxied domain on Cloudflare, and a Caddy reverse proxy, with both the server and database running inside a Docker container, using Docker Compose.

[github.com/
MaxFilsR/Gainz](https://github.com/MaxFilsR/Gainz)

*Caddy, Cloudflare, Debian,
Docker, Git, OPNsense,
Proxmox, WireGuard*

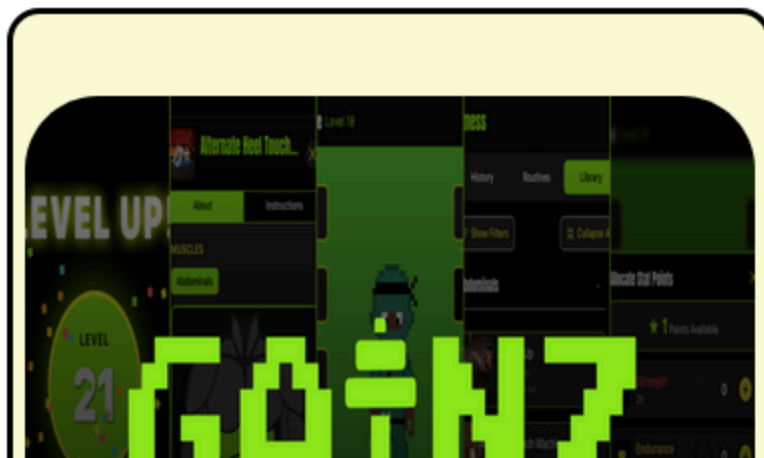

- Installed OPNsense on personal router and fully configured it with local DNS, VLANs, and port forwarding.
- Fully wiped and prepared two mini PCs and a laptop, installing extra storage through SATA SSDs
- Installed Proxmox hypervisors, Debian VMs, and Docker containers
- Configured Cloudflare and a Caddy web server to allow for reverse-proxying and DNS.
- Configured a WireGuard VPN server to allow for better security and private tunnel access.
- Configured a public-facing Jellyfin multimedia server to allow for on-demand media streaming by friends & family.

SAPM (github.com/Dyredhead/sapm)

Linux, Rust

- Used Rust to write a package manager wrapper for the most popular Linux package managers, to create a single, generalized, system-agnostic manager.
- Published as a package to the Arch User Repository (AUR).

Gainz: CSCI 49900 Capstone Final Group Project

Gainz is more than a fitness tracker — it's a fitness game. The goal is simple: make working out fun, rewarding, and addictive through smart gamification and consistent feedback loops.

SAPM

A System Agnostic Package Manager (SAPM) for simple, general use cases. Based heavily off of VanillaOS's apx.

Technical Skills

- **Languages:** Python, Rust, PostgreSQL
- **Frameworks & Libraries:** Actix Web, Flask, SQLx
- **Developer Tools:** Docker, Git/GitHub, Proxmox, Linux, VS Code
- **Non-Developer Tools:** Canva, GoFMX, Mailchimp, Microsoft 365, Photoshop, Squarespace, WordPress, Wufoo
- **Other:** Fluent in Russian
